**“Get it done”** tool will allow users to break down their activities into the categories and set up different “to do” lists for each of them. In its turn each list is divided into three types depending on the stage of completion: ALL (contains full list), COMPLETED and TO BE COMPLETED. Once activity is completed and user sets up a checkmark it transfers to the COMPLETED section automatically. By pressing on an activity object user can delete it, set up high priority (as a result, the object goes on the top of the list), move it back to uncompleted stage. By choosing ADD NEW option user can add new categories/tasks.
